

PROOF-OF-CONCEPT PROPOSAL

One Agent — Invoice Review

AI-assisted pay-application review for Mayo Clinic's Bold. Forward. Unbound. program

The core is already built. We have delivered this class of agent for other owners — the POC shapes it to Mayo's contracts, in Mayo's environment, with Mayo's team.

A review problem measured in thousands of pages

THE REALITY TODAY

- **Invoices run 200–1,500 pages.** across ~9 active BFU projects, every cycle — cost-plus, CMAR delivery.
- **The contract side is bigger.** a master agreement of several hundred pages plus per-project amendments — growing to thousands of pages.
- **General-purpose AI hit its ceiling.** page limits broke the Copilot approach; the review is still largely human.
- **Finance is already building.** Mayo's team is ~40% into a custom Azure solution with a sound two-pathway design.

OUR APPROACH — ACCELERATE, DON'T REPLACE

- ✓ **A proven core, shaped for Mayo.** the review engine, rules library and document intake exist today — the POC configures them to your contracts.
- ✓ **It extends your architecture.** your contract pathway feeds our terms library; your invoice data layer is what every check runs against.
- ✓ **No page limits.** document intake built for 1,000+ page packets — the whole contract, every amendment, every line.
- ✓ **Yours to keep.** model-agnostic, deployed in Mayo's Azure tenant, handed to Mayo IT after the POC.

Inside Mayo's Azure tenant, around Mayo's build

Blue = Mayo's build
your team's two pathways,
unchanged and yours.

Orange = the accelerator
the review engine we bring.

Nothing leaves
all documents stay inside Mayo's
tenant.

All data stays in Mayo's tenant · No training on Mayo data · NDA in place

Ask on the left. See the evidence on the right.

— A process, not a chat toy

the stepper mirrors your cycle: intake → review → CMAR prep → corrections → final verification.

— Chat that drives the document

ask about any line; the pay app opens to the exact page, flag highlighted.

— Reviewers stay in charge

accept or override every finding — each one cites the contract clause and invoice line.

— One agent today, more tomorrow

Invoice Review now; the next agents join the same workspace.

Six weeks to a measurable answer

Clock starts when the data lands. Demo checkpoints throughout — nothing is a black box until the end.

Team: engagement lead · solution architect · 2 AI engineers · cost-plus/CMAR domain expert (as needed) — **≈ 12–16 person-weeks, fixed fee**

Kahua integration, PCO / change-order exposure analysis, and Arizona & Florida scale-out are scoped as Phase 2 — nothing in the POC forecloses them.

When do we call it a success?

THE POC PASSES WHEN — MEASURED ON REAL, HISTORICAL PAY APPS

- ✓ **Catches what your reviewers caught — and more.** on 2–3 projects with known outcomes, the agent finds the documented findings, plus ones the manual process missed.
- ✓ **Duplicates proven.** known duplicate charges across pay-app history are flagged, with few enough false alarms that reviewers trust the flag.
- ✓ **Draft-vs-final closes the loop.** every requested correction tracked to resolution; anything new-in-final surfaced. Nothing slips in.
- ✓ **Hours, not days.** the findings package is ready before the CMAR meeting with materially less reviewer time.
- ✓ **Your team would use it.** finance signs off on the output format and would run the next live pay app through it.

WHAT WE NEED FROM MAYO

1. Documents for 2–3 projects under the existing NDA — contract, amendments, prior pay apps, PCO logs.
2. 1–2 hours with the finance team to shape outputs and review cadence.
3. A named IT contact for the post-POC deployment conversation. No IT effort during the POC.

NEXT STEP

Say go — week 1 starts the day the documents land, and the first demo is two weeks later.

Built to scale — from this pilot to your entire program

The intent: one intelligence layer for all of your projects — automating the entire program for Jacksonville and Phoenix.
